Placental Alkaline Phosphatase Polyclonal Antibody

Catalog No. E-AB-10977

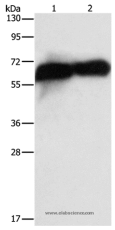

Note: Centrifuge before opening to ensure complete recovery of vial contents.

Description

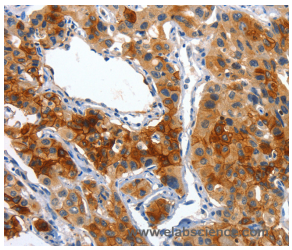

Reactivity	Human
Immunogen	Recombinant protein of human ALPP
Host	Rabbit
Isotype	IgG
Purification	Affinity purification
Conjugation	Unconjugated
Buffer	PBS with 0.05% sodium azide and 50% glycerol, PH7.4

Applications	Recommended Dilution
WB	1:1000-1:5000
IHC	1:50-1:200

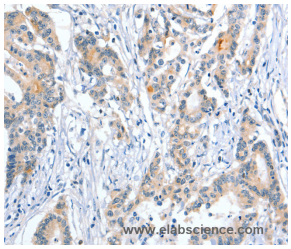

Data

Western Blot analysis of HepG2 cell and Human placenta tissue using Placental Alkaline Phosphatase Polyclonal Antibody at dilution of 1:1450
Calculated Mw:58kDa

Immunohistochemistry of paraffin-embedded Human lung cancer using Placental Alkaline Phosphatase Polyclonal Antibody at dilution of 1:50

Immunohistochemistry of paraffin-embedded Human colon cancer using Placental Alkaline Phosphatase Polyclonal Antibody at dilution of 1:50

Preparation & Storage

Storage	Store at -20℃. Avoid freeze / thaw cycles.

Background

There are at least four distinct but related alkaline phosphatases: intestinal, placental, placental-like, and liver/bone/kidney (tissue non-specific). The first three are located together on chromosome 2 while the tissue non-specific form is located on chromosome 1. The product of this gene is a membrane bound glycosylated enzyme, also referred to as the heat stable form, that is expressed primarily in the placenta although it is closely related to the intestinal form of the enzyme as well as to the placental-like form. The coding sequence for this form of alkaline phosphatase is unique in that the 3' untranslated region contains multiple copies of an Alu family repeat. In addition, this gene is polymorphic and three common alleles (type 1, type 2 and type 3) for this form of alkaline phosphatase have been well characterized.
